

PHILIPS TECHNICAL REVIEW

**VOLUME 34
1974**

Philips Technical Review is published by the Research Laboratories of N.V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands, and is devoted to the investigations, processes and products of the laboratories and plants which form part of or cooperate with enterprises of the Philips group of companies. In the articles the associated technical problems are treated along with their physical or chemical background. The Review covers a wide range of subjects, each article being intended not only for the specialist in the subject but also for the non-specialist reader with a general technical or scientific training.

The Review appears in three editions: English, Dutch and German, all identical in contents. There are twelve numbers per volume, each of about 32 pages. A yearly index is given for each volume and an index covering ten volumes appears every five years (the latest one was included in the last issue of Volume 30, 1969).

Editors:	Drs J. W. Miltenburg, Editor-in-chief
	Dr J. W. Broer
	Ir D. van Dalen
	Dr E. Fischmann
	Drs K. J. Groenewolt
	Ir J. A. Klaassen
	Dr J. Ubbink
	M. B. Verrijp, assistant editor
English edition:	D. A. E. Roberts, B.Sc., M.Inst.P., A.I.L. (Redhill, Surrey)
German edition:	Dipl.-Phys. R. Dockhorn (Hamburg)

© N.V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands, 1975.

Articles may be reproduced in whole or in part provided that the source 'Philips Technical Review' is mentioned in full; photographs and drawings for this purpose are available on request. The editors would appreciate a complimentary copy.

Subject index, Volume 34, 1974

	Page		Page
Air pollution: monitors for ozone, NO and NO ₂	73	mass-spectrographic determination of C, O and N in semiconductors	344
Aircraft guidance equipment MADGE	225	stoichiometric analysis of gallium selenide	350
ANS:		determining the content of active oxygen in oxides	356
onboard computer	1	surface analysis (e.g. LEED; Auger electron spectroscopy; ESCA; ion scattering at surfaces; SIMS)	357
UV experiment (Groningen University)	33	electron microprobe	370
observation of cosmic X-ray sources (Utrecht University)	43	Ion scattering at surfaces	362
reaction wheels	106	IR phosphors	24
sun sensors	208	LEED (elastic scattering of low-energy electrons)	358
horizon sensor	213	Levitated magnets	67
star sensor	218	LOCMOS	19
Auger electron spectroscopy	359	MADGE, microwave aircraft digital guidance equipment	225
Bearings, grease-lubricated helical-groove, of plastic	103	Magnets, permanent, materials research for	193
Capacitor motors, supply-voltage speed control for	180	Mass-spectrographic determination of C, O and N	344
Chemical analysis, see Inorganic chemical analysis		Mathieu equation, stability diagram for	61
Chemiluminescence, application for ozone, NO and NO ₂ detectors	73	Microchannel plates, investigation of, by scanning electron microscopy	270
COD meter	123	Microprobe, electron	370
Compensation wall	96	Microprogram control of P1000 family of computers	132
Complementary MOS circuits, technology for	19	MOS circuits, complementary, technology for	19
Computers:		Motors, see Electric motors, small	
onboard computer for ANS	1	Neutron activation analysis	{ 330
microprogram control of P1000	132	NO _x detector	{ 351
in analysing emission spectra	322	Ophthycograph	257
in neutron activation analysis	330	Oxides, determining active-oxygen content in	356
Data display, polychrome, using a single TITUS tube	129	Ozone detectors	73
Detectors for ozone, NO and NO ₂ using chemiluminescence	73	PD contact-lead patterns, solderable, for ICs-on-tape	85
Electric motors, small:		Permanent magnets, materials research for	193
torque measurements on induction motors using Hall generators or measuring windings	153	Phosphors for converting infrared radiation into visible light	24
speed-controlled d.c. motor for washing machine	163	Phototitus optical converter	274
high-speed solid-rotor induction motors	170	Plasma torch, heating quartz glass with	60
supply-voltage speed control for capacitor motors	180	Satellite ANS, see ANS	
Emission spectrometry, see Inorganic chemical analysis		Silicon and germanium, dislocation-free, vacancy clusters in	244
Environment:		SIMS (secondary-ion mass spectrometry)	366
ozone, NO and NO ₂ detectors	73	Speed control for capacitor motors	180
monitoring the quality of surface water	113	Stabilization by oscillation	61
measuring the oxygen demand of water	123	Stoichiometric analysis of gallium selenide	350
ESCA (electron spectroscopy for chemical analysis)	361	Surface analysis	357
Frequency-analog measurement and control	288	Surface water, monitoring the quality of	113
Gallium selenide, stoichiometric analysis of	350	Titrimetric determination of gallium selenide	353
Germanium and silicon, dislocation-free, vacancy clusters in	244	TITUS tube, single, in polychrome data display	129
Helical-groove bearings, grease-lubricated, of plastic	103	Torque measurements on induction motors	153
ICs-on-tape	85	UV experiment with ANS	33
Inorganic chemical analysis:		Vacancy clusters in dislocation-free silicon and germanium	244
survey	298	Washing machine, speed-controlled d.c. motor for	163
multielement analysis by optical emission spectrometry	305	Water, see Environment	
automatically analysing photographically recorded emission spectra	322	Windows, double-glazed, with very good thermal insulation	242
neutron activation analysis	330	X-ray experiment with ANS	43
line-intensity calculations for X-ray fluorescence analysis	339	X-ray fluorescence analysis	{ 339
			{ 353
